

Getting Started

Before a computer can interact with ClickShare, an application must be launched from the Button. This simple process is described below for both Windows and MacOSX operating systems.

Windows

- 1 Plug the Button into the USB port of your computer

The white ring on the Button will begin to blink on and off.

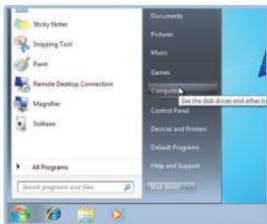

- 2 If AutoPlay is enabled, a window will appear on the desktop.

Select "Open folder to view files" to display the USB drive directory and proceed to Step 3.

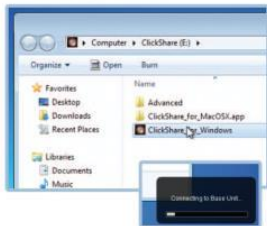

- If AutoPlay is not enabled and no window opens, click the Windows Start button on the bottom left, and select "Computer". Then select and open the USB drive directory and proceed to step 3.

- 3 Double click ClickShare_for_Windows.exe

This will launch the application and a progress bar will show your computer connecting to the Base Unit. Once connected, the dialog will confirm and the Button will glow solid white.

- 4 **I want my computer to show on the display.** If you have connected to the Base Unit, click your Button to show your computer on the display. The Button will glow solid red

I want to remove my computer from the display. Click your Button again. Clicking your Button toggles you on and off the display.

Mac OSX

- 1 Plug the Button into the USB port of your computer

The white ring on the Button will begin to blink on and off.

- 2 After a while, the ClickShare drive icon will appear on the desktop.

Double click on the icon. This will bring up a finder window.

- 3 Double click ClickShare_for_MacOSX.app

This will launch the application and a progress bar will show your computer connecting to the Base Unit. Once connected, the dialog will confirm and the Button will glow solid white.

- 4 **I want my computer to show on the display.** If you have connected to the Base Unit, click your Button to show your computer on the display. The Button will glow solid red

I want to remove my computer from the display. Click your Button again. Clicking your Button toggles you on and off the display.

Important Comment:

The recent Catalina iOS update has disabled screen-sharing on Apple devices as the default setting. One effect is that it stops the use of Clickshare. Please follow the steps below to re-enable screen-sharing on your device

- Connect dongle to iOS device
- Click on Clickshare App when it appears on desktop
- Go to **System Preferences => Security and Privacy => Privacy** scroll down to screen recording and select
- Tick **the box that says Clickshare**
- Unplug the dongle from the device
- Replug the dongle into the device
- Click the Clickshare App when it appears on desktop
- When ready to share click the Clickshare button on the dongle
