Open **Network and Sharing Center**. You can open it from Control Panel, or right click on Network icon at the bottom right of your desktop.

Choose **Set up a new connection or network**.

Choose **Connect to a workplace** (set up a dial-up or VPN connection to your computer) and click Next.
Click on **Use my Internet connection (VPN)**

Type the following:

Internet Address: **147.27.244.1**
Destination Name: **TUC**

Click on **Next**.
Type your user name and password and click Connect.

The connection will not be successful and the following window will appear.

Click on Set up the connection anyway.
Click on network icon, right click on the VPN connection named TUC and choose **Properties**.

Click on **General** tab and make sure that the host name is set to: 147.27.244.1
Click on **Options** tab and make sure that the box **Include Windows logon domain** is not checked.
Click on Security tab. In the Type of VPN field select Layer 2 Tunneling Protocol with IPsec (L2TP / IPSec).

Make sure that only Microsoft CHAP version 2 (MS-CHAP v2) is checked.
Click on Advanced Settings

Select Use preshared key for authentication. In the Key field type: TUC_KEY. Click OK. Click OK at TUC Properties window.
Your VPN connection setup is done.

Click on the VPN connection named TUC and type your user name and password to connect.
